

Project Title	Resilient manufacturing lines based on smart handling systems
<b>Project Acronym</b>	SMARTHANDLE
<b>Grant Agreement No</b>	101091792
Instrument	Research & Innovation Action
Topic	HORIZON-CL4-2022-TWIN-TRANSITION-01-04
<b>Start Date of Project</b>	JANUARY 1, 2023
<b>Duration of Project</b>	36 months

Name of the Deliverable	SMARTHANDLE technologies for intelligent workpiece handling and line reconfiguration		
Number of the Deliverable	D6.1		
Related WP Number and Name	WP6: System integration and AI-based multi-level performance optimization		
Related Task Number and Name	T6.1: Testbeds design and adaptation – Integration of Software and Hardware architecture		
	T6.2: Variform large part packaging – Metal production pilot case		
	T6.3: Delicate and deformable part handling and inline logistics – Consumer goods production pilot case		
	T6.4: Disassembly of multivariant and hazardous workpieces – Battery disassembly production pilot case		
	T6.5: Quantification and comparative analysis – Technology and SSH perspectives		
Deliverable Dissemination Level	SEN - Sensitive		
Deliverable Due Date	30/06/2025		
Deliverable Submission Date	June 30 <sup>th</sup>		
Task Leader/Main Author	TF-CC		
Contributing Partners	TECNALIA, LMS, AIMEN, TU/E, TF-CC, KUKA, ROBOCEPTION, STT, INTRA, DEMCON, ALUMIL, MENICON, ABEE		
Reviewer(s)	ABEE		

#### **Keywords**

Integration, testing, human-centric design, usability, trustworthiness.

### **Revisions**

Version	Submission date	Comments	Author
v0.0	20/03/2025	Table of Contents release	TF-CC
v0.1	26/6/25	Final changes by all partners	All

## **Acronyms and definitions**

Acronym	Meaning
ODM	Overhead Dual Arm Manipulator
PLO	Pallet Loading Optimization
DSE	Dynamic Scheduling Engine
PLC	Production Line Controller
TCP	Tool Center Point
IK	Inverse Kinematics
OMPL	Open Motion Planning Library
RRT	Rapidly-exploring Random Trees
MDS	Manufacturing Data System

#### **Abstract**

This deliverable summarizes the integration and testing activities carried out under the SMARTHANDLE project, which focuses on the intelligent handling of workpieces and reconfigurable lines. The report consists of two main parts: a) early piloting activities and the adaptation of technologies for integrating enabling technology prototypes, and b) human-centric design activities aimed at ensuring technology usability. Testing and integration activities were performed across three industrial use cases: a) Packaging of variform aluminum profiles, b) Human-aware assistive contact lens manufacturing, and c) Electric vehicle battery disassembly.

Prototypes of dexterity, reasoning, and reconfiguration enabling technologies were integrated into pilot demonstrators. Concurrently, an extensive study evaluated the human-centricity of these integrated technologies, assessing their ease of use, overall usability, and trustworthiness. Testing validated the working principles of each block, and the resulting remarks established a clear integration roadmap for the final phase of the project.

#### **Executive summary**

This document reports the activities performed so far in T6.1 while taking into account the results of the technical WPs. It documents the design and integration activities of the SMARTHANDLE technologies on the three pilot cases, namely:

- Variform large part packaging Metal production pilot case: This case deals with the packaging of aluminum profiles on pallets based on personalized customer orders. Details will be provided in section **iError! No se encuentra el origen de la referencia.**.
- Delicate and deformable part handling and inline logistics Consumer goods production
  pilot case: This case deals with the manufacturing and handling of highly customizable
  contact lenses. Details will be provided in section iError! No se encuentra el origen de
  la referencia..
- Battery disassembly pilot case: This case deals with the recycling of EV batteries. Details will be provided in section **iError! No se encuentra el origen de la referencia.**.

The document is organized around the distinct integration activities that are described in section **iError! No se encuentra el origen de la referencia.**: for each pilot case a description of the scenario and the pilot setup is reported, followed by the integration of the SMARTHANDLE technological modules. Section **iError! No se encuentra el origen de la referencia.** is oriented towards the evaluation of the human-centeredness of the integrated system. The complete integrated system will be provided in D6.2 (M36).
